110 V & BATTERY POWERED WELDING MACHINE PRESENTATION AND HANDS ON DEMONSTRATION

November 25, 2019

2:30 PM - 4:30 PM

**NSCC, Pictou Campus, 39 Acadia Ave, Stellarton
Room A159/Welding Shop**

This CWB-A seminar will be both informative and practical to the home hobbyist and welding enthusiasts who are interested in low voltage or fully battery powered welding machines for use at home, around the shop, or in remote locations. These machines are becoming more and more common and are more versatile than ever before in their uses.

The seminar will kick off with a theory presentation on the background on these welding machines including:

Some basic welding theory and safety

Practical applications and uses

Limitations of these smaller machines

Live demonstrations and hands on trials following the presentations

Both Gas Metal Arc Welding (**GMAW** or **MIG**), Shielded Metal Arc Welding (**SMAW** or **Stick**), and Gas Tungsten Arc Welding (**TIG**) will be covered in theory and practically. A live demonstration of these machine's capabilities will be demonstrated in the welding shop after the theory portion of the program.

We encourage all to bring their welding shields and welding jackets to **try your hand with these welding machines** at the conclusion of the session.

_____ portions of the seminar and will be available to answer your questions.

This event is sponsored by the Canadian Welding Bureau – Association, Nova Scotia Chapter, and is a free event and all are welcome.
